Hiring Team

Dear Hiring Team,

I am writing to apply for the AI Specialist role. My background sits at the intersection of AI implementation, operational data analysis, and workflow automation — and the core mandate of this role, analyzing business processes to identify AI opportunities and then actually building and deploying the solutions, is exactly how I work.

I have spent the past year designing and shipping AI-enabled production applications: automated data pipelines with real-time validation, LLM-powered interfaces that make operational data accessible to non-technical users, and tracking tools that replaced fully manual processes end-to-end. At Catalyzt Nutrition I analyzed operations, logistics, and marketing workflows, identified the highest-impact automation opportunities, and built the solutions — multi-step automations, API integrations, and dashboards that teams actually adopted and used. At Ferguson Enterprises I built data pipelines and reporting automation on Azure and SQL Server supporting large-scale B2B operations, then trained the team on the new systems and documented the workflows so they outlasted my involvement.

The heavy equipment context is new to me, but the operational data challenges — service scheduling, inventory management, predictive maintenance signals, parts and fulfillment tracking — map closely to supply chain and logistics work I have done. I am a fast learner in new business domains and I bring the data and AI toolkit to translate operational questions into implemented solutions quickly.

I would welcome the chance to discuss this role further.

Sincerely,
Alexander Tobin
