Hiring Team

Lewis & Clark Capital

Dear Hiring Team,

I am writing to apply for the Value Creation professional role at Lewis & Clark Capital. The mandate you've described — partnering with portfolio company leadership to identify practical, high-impact technology and automation opportunities, then actually building and deploying them — is exactly how I operate.

I am a builder. Over the past year as a freelance developer, I have taken multiple projects from zero to production: a government data ingestion platform, a logistics tracking tool replacing a fully manual workflow, and a SaaS platform deployed in 7 days. These weren't POCs — they handle real data for real users. Before that, at Catalyzt Nutrition, I built the entire Airtable operational infrastructure from scratch: linked record architecture, role-based interfaces, multi-step automations, API integrations, and client-facing dashboards. I did this by listening to what the business actually needed, translating those needs into systems, and shipping. At Ferguson Enterprises I led data infrastructure projects across IT, Finance, and Operations — gathering requirements, managing timelines, and delivering tools that got adopted and used. I have done this across three different organizations in three very different industries, which I think maps well to the multi-portfolio context of this role.

What I bring specifically: Python and SQL at a working scripting level, REST API integrations, no-code/low-code platforms (Airtable, Smartsheet, Power Platform), AI/LLM implementation in production environments, and strong process documentation habits that turn one-off builds into repeatable playbooks. I am comfortable presenting to and working directly with senior leadership, and I thrive in ambiguous, fast-moving environments where the specification isn't complete before the work begins.

I would welcome the opportunity to discuss how my background aligns with what Lewis & Clark Capital is building.

Sincerely,  
Alexander Tobin
