Hiring Manager

NovumHealth

Dear Hiring Manager,

I am writing to apply for the SQL ETL Developer role at NovumHealth. Building and maintaining reliable data pipelines that analysts and business users can count on is exactly the kind of end-to-end ownership work I have been doing — and I am drawn to the opportunity to apply that experience in a mission-driven healthcare organization focused on real outcomes for real members.

The technical requirements of this role map closely to my background. At Ferguson Enterprises, I developed complex SQL queries, stored procedures, and transformation logic against large MS SQL Server databases, designed ETL workflows on Microsoft Azure translating legacy data structures into modernized analytics-ready datasets, and produced comprehensive source-to-target mapping and data lineage documentation reviewed by leadership. I led multi-source data integration projects that required exactly the kind of careful validation, reconciliation, and cross-system debugging that keeps pipelines running accurately and on schedule. More recently, my freelance development work has deepened that foundation — I design structured PostgreSQL schemas, multi-stage ETL transformation pipelines, and validation rules with quality monitoring built in at every ingestion point.

I am a self-motivated problem solver who documents my work, communicates clearly with both technical and non-technical stakeholders, and treats data integrity as a first-class responsibility. I understand the stakes of inaccurate data in a healthcare context and bring the discipline required to meet that standard consistently. I am ready to contribute from day one and grow quickly into expanded ownership of cloud platform workflows.

Thank you for the opportunity to apply. I would welcome the chance to discuss how my experience fits NovumHealth's needs.

Sincerely,
Alexander Tobin
