General Dynamics Information Technology

Hiring Manager

Dear Hiring Manager,

I am writing to apply for the Member Services Processing Specialist role at GDIT. The job description maps closely to exactly the kind of work I have built my career around: high-volume record processing, rigorous validation against documented SOPs, and operating with the precision and accountability that federal program environments demand.

Processing, Validation, and Audit-Quality Documentation

At Ferguson Enterprises, I processed freight claim records daily using Excel and Airtable — validating incoming documentation against program eligibility criteria, maintaining detailed case notes for every record, and escalating edge cases with clear decision rationale. At Born Primitive, I handled high-volume supply chain and inventory data entry under strict productivity and accuracy standards, reconciling records across enterprise systems and producing statistical reports to support quality control. At Catalyzt Nutrition, I transferred records from source documents to database systems, identified discrepancies, and resolved issues within scope before escalating those that required supervisor review. The fundamental discipline across all of these roles was identical to what you have described: apply the procedure, validate before committing, document clearly, and escalate what cannot be resolved cleanly.

SOP Adherence and Independent Judgment

The GDIT role requires someone who can follow detailed procedures with discipline and also exercise independent judgment on edge cases — identifying what needs escalation and what can be resolved within established parameters. That is precisely how I have operated across every processing-intensive role in my career. I understand the difference between an item that fits within authorized scope and one that needs to come back to leadership with documentation, and I do not sit on unclear records hoping they resolve.

Remote Operations and Distributed Work

I operate fully remotely and have done so throughout my career. My current freelance practice — serving callcatchai.online, primelayertrades.com, hereraspreadsheets.com, and kizunaperformance.com — involves managing concurrent workstreams across multiple clients with zero supervision. Every deliverable I produce meets the same quality standard I would apply in an in-person environment, because my professional reputation depends on it. I am fully equipped with a dedicated, distraction-free remote workspace and the discipline to perform at a high level independently.

I would welcome the chance to discuss how my processing and validation experience maps to the TCRP-style work environment GDIT operates. Thank you for your consideration.

Sincerely,
Alexander Tobin
