Hiring Team

Keen360, Inc.

King of Prussia, PA

Dear Hiring Team,

The CRM Business Configuration Analyst role at Keen360 describes how I've spent the past several years working: taking a client's business process requirements, translating them into a structured solution design, configuring the platform hands-on, and seeing it through to go-live and training. I haven't worked in Creatio specifically, but the pattern — requirements elicitation, Blueprint documentation, no-code configuration, QA, client enablement — is the same across every platform I've worked on, and I pick up new platforms quickly.

My primary no-code CRM platform is Airtable, which I've deployed end-to-end for multiple client organizations. At Catalyzt Nutrition, I built the full CRM and operations infrastructure from scratch: linked record architecture, role-based interfaces, multi-step automation workflows with conditional logic, client-facing intake forms with validation, and dashboard layers for leadership reporting. I integrated the system with HubSpot and third-party tools via API triggers, and I extended native platform capabilities with custom JavaScript through the Scripting Extension when the built-in automation logic wasn't sufficient. At Ferguson Enterprises, I designed and deployed a centralized Airtable project management system adopted company-wide, running requirements sessions with C-suite and VP-level stakeholders and managing delivery through Agile sprints. In my current freelance contractor work across callcatchai.online, primelayertrades.com, and hereraspreadsheets.com, I own the full client delivery arc across three concurrent engagements with no management overhead — which maps directly to Keen360's self-directed operating model.

The skills your preferred candidates list — no-code/low-code configuration, dashboard and workflow design, generative AI tools, system integrations, Agile methods — are all in active daily use for me. I'm excited about Creatio specifically because the AI-native, no-code positioning is exactly the direction I want to build depth in. I'd welcome the opportunity to talk through my background and learn more about what your team is building. Thank you for your consideration.

Sincerely,
Alexander Tobin
