Varonis Systems

Hiring Manager

Dear Hiring Manager,

I am writing to apply for the Business Operations Analyst role at Varonis. The description — supporting revenue business units with structured analysis, building dashboards that track sales performance and pipeline health, and partnering with leadership to drive operational decision-making — is the exact kind of work I have built my analytical practice around.

Executive Dashboards and Revenue Analytics

At Ferguson Enterprises, I built Power BI dashboards and KPI frameworks for CFO- and VP-level stakeholders — standardized metric definitions, validated data sources, and leadership-ready visualizations that reflected actual commercial reality. I understand the discipline of reconciling pipeline data against financial system figures, because that discrepancy always exists and always matters. In my current freelance practice serving [callcatchai.online](#), [primelayertrades.com](#), [hereraspreadsheets.com](#), and [kizunaperformance.com](#), I develop C-suite commercial analytics frameworks that go past the numbers — identifying what is driving revenue trends, what the pipeline data actually signals, and what recommendation follows from the analysis.

Structured Analysis for Operational Decision-Making

My analytical deliverables follow a consistent structure: what is happening, why it is happening, why it matters, and what the recommended response is. When I conduct ad hoc trend analysis or performance diagnostics for a business segment, I frame the output for leaders who need to make resource and process decisions — not just review historical data. I am comfortable presenting findings with appropriate confidence, challenging assumptions when the data tells a different story, and working iteratively with sales and operations leadership to sharpen the analysis.

Technical Stack

Power BI and advanced Excel are my primary tools for business analytics. I am proficient in MS SQL Server for querying large datasets and comfortable working within CRM-adjacent reporting environments. I learn new tools quickly and have a track record of optimizing CRM and workflow platforms for both data quality and reporting utility.

I would welcome the opportunity to discuss how my analytics experience aligns with Varonis's operational needs.

Sincerely,
Alexander Tobin
