AirLife

Hiring Manager

Dear Hiring Manager,

I am writing to apply for the Data Analyst - Operations role at AirLife. Power BI report development, SQL data modeling, end-to-end analytics delivery from requirements to deployment, and driving process efficiency through automation — this is the exact scope of analytics work I have been doing across my career, and I am confident I can contribute immediately.

Power BI and SQL Analytics Delivery

At Ferguson Enterprises, I built Power BI dashboards and KPI frameworks for CFO- and VP-level stakeholders — covering the full report development lifecycle: requirements gathering with business users, data modeling in MS SQL Server and Azure, report development and deployment, and ongoing maintenance as business needs evolved. I understand what it means to own a reporting solution end-to-end, not just build it once and hand it off. In my current freelance practice, I develop operational and financial reporting dashboards for four active clients — callcatchai.online, primelayertrades.com, hereraspreadsheets.com, and kizunaperformance.com — integrating multi-source data into leadership-ready visualizations.

Process Improvement and Automation

At Ferguson, I automated manual data entry and reporting processes using Excel VBA, reducing processing time significantly. I use Python and Airtable Automations to eliminate repetitive data tasks and improve pipeline reliability. When I identify an opportunity to make a business process faster or more accurate through automation, I build it — and I document it so it can be maintained after the fact.

Working with Business Stakeholders

I am effective at the requirements gathering side of analytics work — translating what a business user needs into a well-structured data model and a report that actually answers their question. I know how to communicate with non-technical stakeholders, present analytical findings clearly, and stay close to the business users who depend on the reports I build. That ongoing partnership — not just delivering a dashboard but being the subject matter expert business users trust to help them use data well — is what I aim for in every analytics engagement.

Regarding the on-site requirement at the Deerfield, IL location: I want to address this directly. I am based in Virginia Beach, VA and operate fully remotely. I am confident I can meet and exceed every requirement of this role — Power BI development, SQL analytics, stakeholder communication, project management, and continuous process improvement — without physical presence at the office. My entire career has been built on delivering high-quality analytical work in a distributed environment, and my freelance clients receive the same rigor and responsiveness they would expect from an in-office analyst. Remote work is not a limitation for this type of role; it is a different logistics arrangement for work that is inherently output-driven. I would welcome the conversation about whether a remote arrangement could work for AirLife.

Sincerely,
Alexander Tobin
