Archer Systems

Hiring Manager

Dear Hiring Manager,

I am writing to apply for the Data Entry Analyst position supporting Archer Systems' Talc Claims Resolution Program. With 10+ years of experience processing high-volume data records accurately across legal operations, supply chain, and enterprise environments, I understand what this work demands — and I take it seriously.

High-Volume Data Entry and Validation

At Born Primitive, I processed high-volume supply chain and inventory records daily — entering, validating, and reconciling data across enterprise systems while meeting strict productivity and accuracy standards. At Ferguson Enterprises (freight claims), I compiled and validated data across Excel and Airtable with rigorous quality control, flagging discrepancies and maintaining detailed records for each claim. At Catalyzt Nutrition, I handled customer record entry, data transfers from source documents to database systems, and spreadsheet reconciliation across large datasets. Throughout each role, the fundamental discipline was the same: apply the procedure, validate before saving, document clearly, escalate what you cannot resolve.

Audit Trails and Exception Handling

I understand the importance of clear documentation and proper escalation paths, especially in legal and claims environments where every record has downstream consequences. I am meticulous about maintaining notes, tracking pending items, and communicating exceptions promptly — not sitting on an unclear record hoping it resolves itself.

Microsoft Office Proficiency

I am a daily user of Excel (VLOOKUP, SUMIF, COUNTIF, Pivot Tables, advanced functions), Outlook, Teams, and SharePoint. I am fully comfortable in web-based data systems and workflow tools and can adapt quickly to proprietary platforms.

I am available as a 1099 independent contractor and can start quickly. I would welcome the opportunity to contribute to the TCRP program at Archer Systems.

Sincerely,
Alexander Tobin
