Natus Medical Incorporated

Hiring Manager

Dear Hiring Manager,

I am writing to apply for the Business Intelligence Analyst role at Natus Medical. The description resonates strongly with how I think about analytics work: not as a dashboard-production function, but as a business curiosity and structured investigation practice that ends in a confident, defensible recommendation.

Commercial Analytics — Beyond Reporting

In my current freelance practice serving calcatchai.online, primelayertrades.com, and hereraspreadsheets.com, I build C-suite commercial analytics frameworks that go past the numbers. When revenue trends or product adoption metrics shift, my job is to determine WHY — digging into customer behavior, pipeline data, pricing dynamics, and market signals to surface the driver and recommend a response. I have built TAM/SAM models, adoption curve projections, and win/loss analysis frameworks for founders and executives who need to make resource and roadmap decisions, not just review reports. That structured, inquiry-first approach is exactly what you have described.

Dashboard and KPI Infrastructure

I design Power BI-equivalent dashboards and define KPI standards that reconcile across CRM, financial, and operational data sources. At Ferguson Enterprises, I built the executive reporting infrastructure for CFO- and VP-level stakeholders — standardized definitions, validated sources of truth, and leadership-ready visualizations that reflected actual commercial reality. I understand the discipline of reconciling HubSpot pipeline data against finance system revenue figures, because that discrepancy always exists and always matters.

Executive Communication

My deliverables to executive audiences are structured around what/why/why it matters/what we recommend — not just what happened. I am comfortable challenging assumptions when the data tells a different story, presenting conclusions with appropriate confidence, and translating complex analysis into clear, actionable language for leaders who do not work with data daily.

The combination of commercial analytics depth, BI infrastructure experience, and executive communication skills you are looking for is the core of what I do. I would welcome the chance to discuss how I fit your team's needs.

Sincerely,
Alexander Tobin
