Cloud Cabling Inc

Hiring Manager

Dear Hiring Manager,

I am writing to apply for the Project Coordinator role at Cloud Cabling Inc. The core competencies you have described — task management, milestone tracking, billing coordination, stakeholder follow-up, and keeping projects moving without being asked — are exactly what I do every day, and I can bring that same execution quality to your team.

Project Coordination and Task Management

At Ferguson Enterprises, I introduced and administered Airtable as the centralized project management platform for a cross-functional team — building and maintaining task trackers with clear owners, deadlines, and status updates. I coordinated external vendors, internal stakeholders, and executive leadership across multiple concurrent projects, tracked milestones and dependencies, and escalated risks before they became delays. That same approach — knowing what is open, what is at risk, and what needs a decision — is how I manage all of my current freelance engagements across four active clients.

Billing, Invoicing, and Documentation

I prepare invoices, maintain billing records, and track payment status for my freelance clients. At Ferguson, I maintained detailed financial records and audit trails for freight claim processing, coordinating with internal finance teams to resolve discrepancies. The billing coordination component of this role — preparing invoices, tracking status, coordinating with Project Managers and finance on outstanding items — is familiar work.

Independent Remote Operations

I work fully remotely, independently, and without requiring detailed instruction for every step. If priorities shift, I adapt. If information is incomplete, I find another way forward. I surface problems early, document decisions clearly, and make sure Project Managers are spending their time on priorities that require their judgment rather than chasing status updates.

I recognize that prior experience in the Low Voltage or IT industry is listed as a requirement. While my direct industry experience is in data analytics, logistics, and business operations rather than low voltage infrastructure, the project coordination fundamentals you have described are directly transferable. I am confident I can come up to speed on domain specifics quickly and deliver at a high standard from early in the engagement.

I would welcome the chance to discuss the role.

Sincerely,
Alexander Tobin
